Great Falls, Montana

=====

As primary health care providers, denturists are on the first line in protecting the health, safety, and well-being of their patients. One important aspect of their practice involves the diabetic patient. Knowing how to recognize and treat these patients is critical. In this presentation you will learn, among other aspects:

- How common is diabetes
- What types of diabetes exist
- What is pre-diabetes and how do you recognize it
- What are the signs and symptoms of diabetes
- What are the complications associated with diabetes
- How dentures affect the diabetic patient
- How do you manage the diabetic patient
- Are there any preventive measures
- What are the myths surrounding diabetes

If you do not know these answers, here is an opportunity to learn and to enhance the quality of your practice.
